My father's neighbors were doctors, teachers, lawyers, and a cop. They were also the nicest people I'd ever known. Nothing was ever done without my parents' consent. A new hospital financing model for trauma patients. The incidence of severe trauma, in combination with the current health care situation, has led to a dramatic increase in health care expenditure. The potential benefits of a new trauma financing model were evaluated in a study of 4500 trauma patients, comparing the first half of the study period (January 1, 1992, to May 31, 1992) with the second half (June 1, 1992, to December 31, 1992). The model was implemented through the introduction of a system of partial charge-for-service payment for trauma patients in the southern part of the province of Tuscany. This new reimbursement system and a fundamental reorganization of hospital care procedures were introduced simultaneously. The expenditures on in-hospital charges were reduced by 47%, while the hospital operating costs were reduced by 5% (47 vs. 42.5%). Total hospital costs were reduced by an average of 11%. A further decrease of 27% in the average length of hospital stay was observed. The time required to reach a final diagnosis, although not reduced, was shortened by 1 day. A less aggressive approach to rehabilitation and a reduction in the number of visits to secondary and tertiary care facilities were also observed. The number of readmissions was reduced by 6%, with a potential savings of nearly 900,000 euro for the 4500 patients studied.Q: Chrome Extension - External JavaScript (in a Chrome Extension) can't access local storage Is it possible for an extension to access localStorage from any other file in my extension? I have a small Chrome extension which contains a resource.html file which contains the html for the contents of the extension. The content of the extension is basically a form which the user can fill in. I would like to keep this in a separate file so that it can be reused in other projects. I have tried storing the form data in the standard chrome storage, as well as using localStorage, but both of them don't seem to work. //window.storage is defined in resource.html var storage = window.storage; storage.setItem('quiz', 'quiz'); //localStorage is defined in resource.html localStorage.setItem('quiz', 'quiz'); I have tried the same code in the manifest.json file as well, but that doesn't seem to work either.
